KETRA®

Design Studio Software Version 1.4

- Sets color and intensity information on all products
- Authors preset scenes and shows
- Serves as a content management system for your customized library of light settings
- Ensures remote backup capabilities and multi-user collaborations via cloud integration
- Local file storage and archiving for project data
- Included with any purchase of Ketra Hardware
- Complimentary to Design Studio, Ketra Tech Tool is a technician oriented programming software tool that enables power-user functions such as updating firmware on lighting and controls products

Ordering Code: DSCONFIGWIN1

Features

- Easy to use interface guides setup and configuration
- Automated addressing of the entire Ketra lighting system
- Wireless connection via the Ketra N1 Wireless Interface makes it easy to configure a single lamp or a complete lighting system

- Ability to set and adjust specific color points
- Includes Ketra's library of curated profiles
- User friendly sliders and color pickers simplify hue and intensity selection
- Fixture groups for simplified configuration and control
- Configuration of I/O ports in controls automation products

- Integrated diagnositic tools

- Automatic synchronization with cloud-based Ketra servers provides remote data backup and automatic software updates

- Local file storage and archiving for project data
